

ABSTRACT

A soap impregnated fabric and a method of making a soap impregnated fabric is disclosed. A normally solid soap is heated to a temperature above the soap's melting
5 point, thus causing the soap to be in a liquid state. Scented oils and or coloring can be added to the soap while the soap is in a liquid state. Pieces of fabric are placed in the liquid soap and allowed to soak in the liquid soap until the fabric is sufficiently saturated with the liquid soap. The fabric pieces are removed from the liquid soap and the soap
10 saturated into the fabric is allowed to solidify.
